

Hi

I do everything again

Step by step with two FW using same settings (all as default - only my password 13 char and MAC clone) and do Factory Reset also

Get log after device Reboot

Device work with TOR as I wrote before 380.67 - problem and 380.66.6 - work

But I compare Log files and find out that on 380.67 something start not the same time as on 380.66.6

On 380.66.6 this start like this :

Aug 1 03:00:55 WAN Connection: WAN was restored.

....

Aug 1 03:00:56 dnsmasq-dhcp[286]: DHCPDISCOVER(br0) x:x:x:x:x

Aug 1 03:00:56 dnsmasq-dhcp[286]: DHCPOFFER(br0) 192.168.1.5 x:x:x:x:x

Aug 1 03:00:56 dnsmasq[286]: read /etc/hosts - 5 addresses

Aug 1 03:00:56 dnsmasq[286]: using nameserver y.y.y.y#53 for domain beeline

Aug 1 03:00:56 dnsmasq[286]: using nameserver z.z.z.z#53 for domain beeline

Aug 1 03:00:56 dnsmasq[286]: using nameserver z.z.z.z#53

Aug 1 03:00:56 dnsmasq[286]: using nameserver y.y.y.y#53

Aug 1 03:00:56 dnsmasq-dhcp[286]: DHCPDISCOVER(br0) x:x:x:x:x

Aug 1 03:00:56 dnsmasq-dhcp[286]: DHCPOFFER(br0) 192.168.1.5 x:x:x:x:x

....

Aug 1 03:00:57 dnsmasq-dhcp[286]: DHCPREQUEST(br0) 192.168.1.5 x:x:x:x:x

Aug 1 03:00:57 dnsmasq-dhcp[286]: DHCPACK(br0) 192.168.1.5 x:x:x:x:x iPhone

Aug 1 03:00:57 wan: finish adding multi routes

...

Aug 1 03:00:57 start_nat_rules: apply the nat_rules(/tmp/nat_rules_eth0_eth0)!

...

On 380.67 **ALL NOT BOLD** sentences start before **Aug 1 03:00:55 WAN Connection: WAN was restored.**

And sentence **Aug 1 03:00:57 wan: finish adding multi routes** I don't find at all

May be it help

Now I again on 380.66.6

Thanks

Sergey
